

Permanent Cosmetics by Donna Furr

Approximate Healing Schedules - What You Can Expect, Day by Day...

NOTE: Permanent makeup procedures are affected by the canvas (your skin) that they are performed on. If your skin is sun damaged (even from tanning beds), thick and uneven in texture, or excessively dry or oily, the result cannot be expected to be perfect after the initial procedure. Scars on the lips from fever blisters cause pigment removal. Lifestyle, medications, smoking, metabolism, facial surgery, and age of skin all contribute to fading. Touchups are needed 30 days after your initial procedure to ensure the best result and to keep your permanent cosmetics looking the best. Your procedure maintenance, as outlined in your pre-post procedure directions, is very important.

EYELINER

DAY	EFFECT
Day 1	Swollen, like you've been crying, with a heavier eye makeup look.
Day 2	Swollen, usually for a few hours after waking up, with the heavier eye makeup look continuing.
Day 3	Swelling decreases with a tight feeling. The pigment begins to lift away from the skin.
Day 4	There is a " <i>pinching</i> " feeling. Some itching is normal as the skin begins to flake. DO NOT PICK AT IT.
Day 5	Blinking movements of the eye usually removes all pigment by this day. Color is somewhat grayish and will take a few more days to clarify to full color.
